24 hour UTC run 091220 of sub surface rm3100 magnetometer compared with the Intermagnet.org Fredericksburg,VA magnetometer. Data collected with D. Witten runMag 400 cycle count and register 0A set to 10. Data points are 60 second running averages to coincide with the Intermagnet data plot format. Temperature variation over the run time was -0.7degC. Each rm3100 Yaxis spans 100nT with Yaxis divisions adjusted to match the Intermagnet 10nT tick marks. J.Madey - K2KGJ
